

Setting

- 2285 AD
- Second Great Industrial Age
- The System Gliese 667 (Triple star system)
 - The Dostra-7 asteroid belt around the binary stars
- Research facility owned by the Bivratum Corp
 - Research facility uses Nuclear (?) power
 - Facility has been abandoned (may have certain parts in ruins)
 - There could be corrosion
- Facility can be hidden inside asteroid (company wants to hide the base from the GSC)

Story

- Protagonist (named Charles) is hired by Bivratum Corp
- The facility was abandoned by the scientists because they don't want the corporation to get their hands on the technology
- Starts in the hangar, tell player to get helper robot and helmet, step out
- Try to power the station (may or may not work)
- Go to the third floor try to find research data
- The player will have a choice at the end to destroy the station (because player finds that corp is evil) or return it (that's the ignorance route of not finding the audio logs)
 - I still say we have the option of the player taking the time warp robot with him so we can have a second chapter

Background about story

- Bivratum Corp owns the facility to research time
- Element 159 was found on the asteroid
 - It has time warping capabilities
 - Used in the time robot
- Government in space at the time is the Galactic Space Coalition (GSC)
- Bivratum wants to use Element 159 for evil reasons
